I downloaded the full package but I can't find direct scsi version of sfs anywhere... it was removed or ... ?
I'd like to try to break that 4 GB limit...

My versions of SFS don't support direct-SCSI (HD_SCSCICMD) since using it can cause problems, incl. beeing unable to boot at all any more for example with the old kickstart ROM IDE scsi.device, and using it can't fix anything NSDPatch doesn't as well in a much better way for old drivers.

To use HDs > 4 GB with AmigaOS 3.0/3.1 install [NSDPatch](#), for AmigaOS 3.5/3.9 that's not required since NSDPatch is included in SetPatch.

Or get one of the old SFS versions from John ([1.84](#), [1.58](#)) which still supported using HD_SCSCICMD, but if it doesn't work with my versions and NSDPatch they wont work either.
