Transmission/Torrent problems?

I've recently tried to use Transmission and was pleasantly surprised. It worked fine and had a nice interface.

But...

after trying to download anything, I got multiple lockups.

Searching for info, I found the "blame" was placed on SFS partitions. Had to create a FFS partition to be able to use torrents.

So, my question is: is this true? And if so, can it be solved?

Thanks in advance.

Nuno
