Automatic Window Update

Would it be possible for automatic window updating to be enabled when window contents are updated from another process in Workbench?

For example:

If I extract an archive to RAM: using Unarc and the RAM Disk window is open already, the contents are not automatically refreshed unless I do it manually from the Workbench menu. This is a bit of a nuisance.

I believe that the ability to implement this is now available in OS4.1 so could an option to enable this be made available through Workbench prefs so it could be turned on or off depending on user preference?

Please, please, please!

Thanks in advance.
