no, since the system assumes only the files in the root are present protect with whatsoever arguments also applies only to them. sigh.

If it's a FFS2 partition, nothing else prevents accessing directories without "r" bit set, try

protect #?+r

protect #?/#? +r

protect #?/#?/#? +r

protect #?/#?/#?/#? +r

...

instead. Maybe the "e" bit has to be set instead, or both have to be set, I don't know what exactly FFS2 uses.
