investigate more the AOS4 copy of my key. 9 bytes are lost between the original on the SAM and the copy on the USB key.

-amicynix/./cygnixPPC/share/icons/amigaos4/48x48/stock/net

dopus4 PPC: size 0. missing .dummy file (1 byte). copy the file from the original. OK. but size 0 again. move the key on the classic/poseidon/spider2 and size =0 and really no file inside.

-amicynix/./cygnixPPC/share/icons/hicolor/128x128/stock/net/

same as the previous examples.

- dopus4 PPC copy the file but zero if size but file real when seing inside the drawer.

- dopus4 68k really zero inside and no file inside.

lots of .dummy with 1 bytes inside on amicynix but sometime dopus4 ppc sometime failed to copy some .dummy files.

Tested to copy alone rox file over the one on the USB key and no problems.

Look like a problem with dopus4 PPC. Not said that dopus4PPC crash my first copy of the system on the key. at least, sometime, error when copying small files from amicynix drawer.

maybe someone else could confirm by copying this part of amicynix on an usb key.
