@all

the test is copying my whole DHx: (with amicygnix a part of) with dopus4 PPC last version (64 bit copy enabled) on a OCZ USB key 16go.

- first time, key crashed. 8+3 characters ????

- second time, work but 11 bytes missing from 11 .dummy files with 1 bytes of size each (see places on my previous post).

- amicygnix/rox hard to copy (error message on dopus4ppc but copy is done finally).

NOTE: have seen the matrix blanker freeze BTW.

I'm just searching to discover if dopus4PPC have a bug when copying .dummy files from amicygnix. for sure, the other method to make a .lha for all the system work better.

please try to reproduce this problem by copying amicygnix drawer on one of your USB key (empty).
