Strange things are happening...SFS2

Hi,

there is something strange going on with one of my partitions with SFS/2:

There seem so happen random data "disappearance". Maybe this is something that is happening for some time now, but as i do not check my data every day...

The "oldest" data structure on this partition are the icons from Mason and Klesterjr, which i downloaded immidiately after getting my SAM. One after another in some of the directories the .info-files disappear - the drawers are empty or partly empty, \*subdrawers\* seem NOT to be affected, only files! Yes, I know that there WERE icon files in there - i can remember them (i.e. icons for YAD). Which are not there anymore. And, no, i did not copy or move them to another place...

At the moment there seem to be only the DATA (DH2:) partition affected, is there anything i can do? maybe a check with some (what? partition wizard?) program?

This is my current partition layout:

Data:/DH2: SFS/2 91528GB Block 1K

Device = sii3114ide.device

Unit = 0

Flags = 0

Surfaces = 3

SectorsPerBlock = 2
