The swedish locale is still broken, RAmiga+. does not clean up icons.

Moving windows is slower.

PPaint opens a requester saying 'Attention: Memory Save Mode'

Working with PPaint in low resolutions (320x240/320x256) and few colors (anything less than 256) doesn't work, as the BG color is always set wrong, it's purple when it should be black.

When working with low resolutions in PPaint and zoom mode, the pixel you are drawing with moves around a little depending on where you point at the screen, it's not in the center of the marker as it should be.

Moving windows: change to simple refresh or 16bit

ppaint: edit your startup-sequence and add 'ADDCHIPRAM=4' for 4mb of emulated chipram

ppaint2: iirc that's always been like that.
