### **Update...**

I deleted my 2nd FFS partition and created a 2nd JXFS partition to use up the rest of the hard drive. System boots up fine with no complaints whatsoever.

So far I have only 2 videos stored in the new partition.

### **SWAP**

DH0 = FFS = main OS4.1 system partition approx 2 GB

DH1 = JXFS = miscellaneous stuff approx 35 GB

DH2 = JXFS = some more stuff approx 193 GB

I'll play around some more and see if I can squeeze in AmiCygnix somewhere else on the hard drive.
