Your finding seems wierd to say the least.. 😊

My JXFS volume has disappeared completely now 😞 The partition is still there though says MediaToolbox and it is auto-mountable.

It disappeared after I connected and removed my CompactFlash card I have for back ups.

Because of bit errors I got on the CF card aswell I decided to comment out Kickstart/diskcache.library.kmod. Perhaps that is why the JXFS partition doesn't mount? Does it require diskcache.library?
