Yeah, I know I can burn a CD/DVD. Even have AmiDVD set up, but haven't quite figured out how to use it yet.

Personally, I'd rather have a Zip disk I can boot. It also makes for easier updating of content (just copy it!), versus the CD/DVD (re-burn it for one little file?). I have a tendency to tweak a disk until I like how it works, then come back and tweak it some more. Having to re-burn the CD/DVD every time would be extremely time consuming.

I suppose I could make a bootable floppy that has the mountlist in it, which mounts the Zip, then hands everything over to it for the rest of the booting. Seems cumbersome to have to do it that way, though.
