Update ... Temporary fix ... disabled rear USB ports on MicroA1

Original post ...

Most of the time, I get a white workbench screen when I boot from my CD-R.

When my system finally booted into the screen where you can choose what you want to do my system froze.

MicroA1 with 750 GX CPU and 256 MB RAM

I have not formatted my system partition yet because I think I should at least be able to boot into something usable from the CD.
