CrossDOSFilesystem was changed for v53, however this may not be entirely relevant as v53.1 on OS4.1 had the problem also.

WINDOWS1252/S (V53.2)

Convert 8p3 names not with CodePage 858 but with Windows-1252, which is more ISO like. Note that this is not how Windows actually does it, but it is like CrossDOSFileSystem prior to V53.2 did it.

OK. V53.2 convert 8p3 names now with Windows-1252. Great to know that CrossDOS has been improved to try to resolving the FAT32 problem Kicko and I and another user have sometime and thanks for sharing with use this information.
