Does anyone know what battery is right for the GVP Jaws II?

The writing on the battery says:

DS TIC 1494 618AC 9310A5

The only result I get when putting that into Google is a Finnish Amiga user having the same problem. I thought it might be:

<http://www.watchbattery.co.uk/shop/p...AGP-625A.shtml>

Based on dimensions, but I assumed it would be a 3V cell. Its only putting out 0.2v so I can't even tell you what it is putting out without seeing a circuit diagram of the board.

I have PM'd someone on amiga.org who said they had a pdf manual, in case its in there. If anyone else has a clue, please let me know. It is not as wide as a CR8032 and it is about twice the height (I don't have a micrometer but with a ruler its about 17mm by 5mm ish).
