Here I can help you : the problem isn't Wordworth itself but the version of "Intaller". To work find copy your CD in RAM (or any other places) in order to replace the "Installer" : either you can copy the Workbench version in the drawer of WordWorth or in the Icon Tool, always of WW, select the path where you have the recent "Intaller" (could be in /utilities, /system or in C:).

And simply click the installer tool :) By the way, don't forget the update 7.01 of WordWorth. Well theoretically the version 7.00 should work since AOS4.x.

Your welcome.

Nic
