BTW, what Prefs/Screens settings are people using to make Wordworth appear OK? My menu colours & window scroll bars are the wrong colour (typically red), but otherwise it looks fine with these settings:

Custom: Wordworth Scr... (created using "Insert open screen...")

#### Display tab

Screen mode: 1280x1024x32 (I don't think this matters due to option below)

Apply: Never

Font: XHelvetica/11 (I don't think this matters due to option below)

Apply: Never

#### GUI

Settings: Like Workbench (if I don't use this then it looks really bad)

Use GUI pens: As default

Ignore app's GUI attrs: NOT ticked

#### Palette

Settings: Like Workbench (probably also required to not look bad)

Use defined colors: As default

Don't lock defined colors: NOT ticked
