Hi @desler

From this version and forwards CW do no longer rely on SDL and all operations are now native.

SDL and Update1 have been clashing a lot here. This sounds great! Still haven't figured why the a CW assign still fails. Yep, never had a assign failure with anything until CW. It's a total mystery, but I'll give a go with the new version! BTW, I'm not using Update1, so I'll let know how it develops plain OS4.1...
