@desler

The most recent version of Cinnamon Writer 0.69 crashes with a DSI error on my machine. Seems to happen if I list font size on default settings.

Earlier versions are more stable for me.

MicroA1 + AmigaOS 4.1 Update 1

Compositing (transparency effects) turned off to conserve video RAM.

UPDATE...

Not crashing now after I deleted all copies of Cinnamon Writer and unarchived the new lha file again.

My system has been acting up lately. Maybe time to format disk and start from scratch again.
