Using SFS/00 on system partition after many years of FFS with long filenames

@joerg

I have used FastFileSystem with Long filenames (DOS/07) for my system partition for my entire time with AmigaOS4, all the way from OS4.0 Pre-release Update 1 up to OS4.1 Update 2.

Today, I reformatted my system partition using SFS/00 and installed AmigaOS 4.1 Update 1 and Update 2. I'm letting my system "soak" for a few days before I add my other stuff and prefs.

I have already noticed a difference in launch time for TimberWolf and OWB, even though both of these programs actually reside on one of my JXFS partitions.

Thanks,
redfox
