"before the problematic HD will hit the bin" maybe you should try to first re-format / partitioning / initialize / low-level format it?

If it were out of order, it shouldn't work at all and not only sometimes not. So, my guess is that it's the filesystem's fault (maybe broken?). Harddrives should also be able to mark out defective sectors which will not be used any further afterwards (as far as I know).

I wouldn't give up so soon 😊

However, backups are a wise decision, I guess 😊
