URL:

Hi Chris,

I installed an SObjs version to a new drawer (not over an old version) but it won't run, it crashes with a null pointer as soon as I type in a URL and hit Enter.

Example:

URL = <http://www.abc.net.au/news> (local news site).

The main window is cleared, a Help bubble pops up telling me to do what I've just done and the machine freezes.

Crash log:

<http://crashlog.os4depot.net/cl314>
