@Chris

New, full install works for me but when I try to relaunch NetSurf I have this message:

*assertion "object->users != NULL" failed: file "content/lcache.c", line 1173*

Snapshot window doesnt work after reboot, only in current session. Save settings works OK.

I dont know how to edit titles in the hotlist window so I have copied my hotlist from NS2.6 and it works. However playing with it causes some graphic corruption.

When I try to post in this forum only *submit* button works.

Pressing A+T and A+N opens new window. Any shortcut to open new tab?
