Public screen closing bug in OS4.1 (FIXED)

Author: : ChrisH

Date: : 2011/6/15 21:13:03

URL:

When OWB is running on a public screen, and then closes, it appears that it never calls CloseScreen(), and instead relies upon the "Open/close automatically" feature of Sys:Prefs/Screens...

... But this feature does not appear to work when a "foreign" window (like a Ringhio notification) is temporarily present on that public screen. You would expect the public screen to automatically close when this foreign window closes, but this does not appear to be the case.

**EDIT: Please note that this bug report is not quite correct, and I have revised it in [Post #22](#)**

**EDIT 2: It appears that both bugs have already been fixed, and so should be available in the next OS4 update!**
