I realised that my OWB screen was set-up in Prefs/Screens, but my SimpleMail one wasn't. Having now added it, it does appear that OS4 closes the public screen after the visiting CygnusEd is closed... however this does not happen with Ringhio.

So there appear to be two very similar bugs:

1. MUI is not handling CloseScreen() failing.
2. Ringhio is causing OS4's "Open/close screen automatically" to fail to close screens.

Still, both MUI & Ringhio are part of OS4, so it is not the fault of buggy 3rd-party programs.

EDIT: Please see [post #36](#) and #37 for more details.
