Further notes:

The MUI YAM screen can be manual closed from the screens tab in the MUI program.

It can also be manually opened.

If I open it and start AWeb with it set to uses YAMS screen AWeb will occupy that screen (defaulting to the workbench if it is not open, unlike with OS4 screens MUI does not appear to auto open screens on demand from non MUI apps)

If I then close AWeb the screen remains open.

I'm not seeing any bugs here just consistant if slightly unexpected behaviour.
