@whose Quote:

if you see explanation of your bug report more deeply as spamming,

Quote:

But I definetly reject your "off-topic" accusation. The bug you reported was about a specific CloseScreen() pitfall, and thats what I was talking about.

There was absolutely NO hint of any mis-use of CloseScreen() (at least in the way you suggest) until post #22. And even then that is related to how MUI (a part of OS4) handles screens, not 3rd party programs.

This thread is about bugs in OS4, not about bugs in 3rd party programs.

(BTW, I have no objection to those parts of your (edited) post that discuss MISbehaviour of OS4 in relation to closing screens - that is the topic afterall!)
