I can only partially confirm it using SimpleMail and Calculator:

- 0) Run SimpleMail and change it's config to open on a new SM-screen newly defined in MUI-Database.
- 1) SAVE, QUIT and re-Run SimpleMail (it opens on SM-Screen)
- 2) Set Calculator's ToolTypes to open on SimpleMails Public Screen
- 3) Run Calculator (it opens in SimpleMail's screen)
- 4) Quit SimpleMail (screen remains opened because of Calculator)
- 5) Quit Calculator -> screen remains open
- 6) Running SimpleMail again, and it goes to its correct Screen
- 7) Quit SimpleMail closes the SM-Screen

But doing the same with a screen defined in ScreenPrefs works properly,
the screen closes when quitting Calculator.

So maybe the bug is in MUI?
