No, what I meant to say is, that I need a version of the gnu assembler ("as") that supports the -M option. Output from IDA

needs to be reassembled with

```
> as -M mycode.asm
```

I have tried whatever version I could find in the geek gadgets repository, but apparently it doesn't support this option. The binutils version in gg is something like 2.10 and the -M option was apparently introduced around 2.14 (to judge from the documentation). At the moment, I'm trying to build binutils 2.14 with --target=m68k-coff, but I don't think this is going to help me a lot...
