Actually, that's a bit odd. AmigaInput *does* have a Generic\_Keyboard driver, but it doesn't show up in the GUI like it used to (suggesting it isn't loading), which is probably why the LowLevel keyboard functions aren't working.

Maybe the version of generic\_keyboard.driver is too low? generic\_mouse (which does show up) is v52, whereas generic\_keyboard is only v51. (yes, it's looking for v52, I just checked, reported on Hyperion forums <http://forum.hyperion-entertainment.biz/viewtopic.php?f=14&t=199>)
