there doesn't even appear to be dev's files (includes etc) for avcodec.library on either aminet or os4depot

Without those you can't even replicate the original....

DvPlayer uses the avcodec.library, so Stephen Fellner (a.k.a Cobra) should have the necessary dev files. IIRC, he used his own video format demuxers, so the avcodec.library may be just the decoders at present. No idea really, but if that's true, then I'd really like to see a full libavcodec shared library (or split into multiple libraries as already discussed).

Anyway, if nobody except Chip has the source-code, then now would be a good time for someone to contact him.

Hans
