I did a search before adding my bounty suggestion, but I completely missed your one.

I have done a bounty but I have never posted the bounty on the site. Because Diego want to wait to know if he is sure or not to complete the project.

I have seen that you have posted yesterday a bounty. Thanks Hans. I will give this information to Diego.

- The goal for us is to update, add more decoders and optimize avcodec.library for our amigas, with cbasa source based. IMHO, creating an avdecoder.library should be made from scratch (hard work).

If the bounty goes well, maybe Diego will think also about this library, I don't know. If not, another bounty for an updated avcodec.library should maybe be made also.

Diego theoretically has asked a loaned NG hardware recently for avcodec.library. He has planned to buy an X1000 when available. This fact is linked with the avcodec.library development.
