The subject says almost all, I have a very long assign list, and if I set the visibility on file requester (CYGNIX_SHOW_ASSIGNS = 1) when I click on Filesystem, my AmigaOne with AOS 4.1u5 freeze immediately with no GrimReaper, the only solution it's the reset button, if I disable assigns in file requester all goes well

Hmm - sounds bad. Anybody else who has this problem?

Seems to be a problem in my opendir() implementation. Could you please download and run this test program in a shell (CYGNIX_SHOW_ASSIGNS should be activated)? If it freezes, could you redirect the output to a file - maybe stored on a USB stick or something else to prevent damage.

Thanks!
