Without assigns it work, leaving only the Startup-Sequence assigns it work, so I tried adding my assigns one by one till the crash, at one point I got a garbage on the last assign with an AOS assign requester, (I have a photo of the screen at the crash moment) so I tried to leave out the assign immediatly after the one with the garbage, and this time I got the GrimReaper visit, now I have the crashlog, the dirttest out and the assign list at the GrimReaper moment, here they are

[crashlog](#)

[dirttest out](#)

[assign list](#)
