Are there any updates specifically for MicroA1? At this time I don't want to install stuff that is for other platforms.

As it is right now, I am getting occasional GR 80000003 DSI on ahi.device shortly after power-up. This is a new problem since I installed Update 6.

Not sure if I am launching my first program too soon after power-up or if it something else. When it occurs it seems to happen when I launch my first program (has happened with OWB and Final Writer 97).
