For one thing, try and look at the crashlog in the first post: The bottom most entry says "GrimReaper" at addr 0x0000000", which is obviously not correct.

I got the same crashlog running Timberwolf-RC3 in diskboot.config & GrimReaper at 0x0000000.

Mine was an ISI exception crash.

My hardware is an A1XE-G3 OS4.1 update6 (uptodate).
