I have been using Screengrab for several months now and its really nice program with some small issues. I hope you can manage to get wally to work. Its a bit slow but very nice if you want to be able to change backgrounds etc.

I have problems with Vacuum. WHEN i try to chat my main chat window doesnt show any text but the person i m chatting with gets my message. If he replies i can see a small window at the bottom right corner with his message but i dont get any text in the main chat window. Alfkil knows about this.

If you close Vacuum its still active but you cant uniconify it. I also get a strange assign question to work when i start vacuum.

Really good work alfkil and its only getting better and better 😊
