I have been using Screengrab for several months now and its really nice program with some small issues. I hope you can manage to get wally to work. Its a bit slow but very nice if you want to be able to change backgrounds etc.

Didn't try Wally yet but i will check, agree ScreenGrab is really nice 😊

Most of icon's stacks do not works because it have "run from shell" icon option. So even if you see there 200000, it didn't works. I.e. shell, stack 2000000, run what you need. At least that fixed all issues on running i have , and Vacuum works for sure.

Ops sorry guys in demo calculator example i set the high stack (2000000) but i forgot to set the "run on workbench" !

Now this example start ok

Vacumm instead refuse to work and crash as before:

Stack: 2000000

Run on Workbench

--> double click on it --> DSI crash (the crashlog is the same as above)

Another one --> demos/browser

Again i set:

Stack: 2000000
Run on Workbench

No crash but i got this message:

Quote:

```
ELF LIBRARY  
Failed to load shared object  
libQtUITools.so
```

Later I will test a few more ..
