So atleast i was able to test this one and .. WOW !

It's truly fast as any other Amiga software, still only a bit slow at startup but choosing a native font and setting all as native (from the QT prefs) the feeling is awesome for sure, not different than any other program written in MUI or Reaction, plus the QT interface is very very nice and modern

That is great progress.

@alfkil

BTW, did you have time to look into using the *gold* linker instead of the standard one? It's supposed to speed up linking by removing symbols that aren't needed at link time. I posted about it [here](#).
