You can create a bootable CD or DVD from your OS4.1 SYS: partition using AmiDVD, then it's just a matter of booting from it and copying all the files over to your harddrive if you ever need to reinstall. I did this with my OS4.1 update #5 install using a guide I found (don't remember what site though).

There's a similar guide on IntuitionBase but that one uses MakeCD:

http://intuitionbase.com/static.php?section=en_Boot-CD
