Tried new 2 games , cool ! Pretty interesting to try World Of Padman as on video all looks quite fast and polished.

Btw, it is possible to add checking on right version of libboosty and if there is none, bring a requester like "you need to install libboosty v xxxx, get it from there" ? If that impossible with sobjes, maybe possible to make it as native os4 library and then do version checking ?

Why i ask, because trying to play in "Me and my shadow" , and it crashes with some weird errors, and i just by some luck read readme about requements.

Or , maybe just including of necessary library into game's SOBJS directory can help as well

ps. "me and my shadow" rockz
