OK, I will not waste more time with this program.
Just for info,

- I remembered that I tested to remove tracks from the list and that it worked.
- yes, explorer don't worked for me, I showed file but was not able to navigate backward
- tree view worked (tested with a list of 2 artists)
- drag'n drop don't work on Qt (never worked on all Qt programs that I tested)
- columns resizing worked
- recent files worked
- buttons worked

But true, if it's not useful (and not working) I trash it ;)
