Ok, so there is no problems actually writing umlaute in, say, JuffEd? Good. I have taken a note on the dialog problem, so that will be fixed. About Ringhio, I was unaware of that "feature", and will see what I can do. Thanks for the report.

I can write "Umlaute" ,that is not the problem.

Only loading files or directories with an "Umlaut" inside the name makes trouble,Ringhio output is wrong , when a program set the icon into Amidock and i make a right mouse click for the contextmenu, the "Umlaut" are wrong like ö=?o
