As said before, I wanted just to complete ClipGrab and QFlv2avi.

And it's done and uploaded on OS4Depot.

**ClipGrab** YouTube videos downloader and converter

- replaced QProcess calls by an external procedure who uses APPDIR:ffmpeg
- enabled the conversion of YouTube videos to MP4, WMV, OGV and MP3 , OGG for audio only output.
- added the AVI format, it seems to be faster than MP4 conversion

<http://www.os4depot.net/index.php?fun ... e=video/misc/clipgrab.lha>

**QFlv2Avi**

QFlv2Avi is a little tool who uses ffmpeg to convert files from flv to avi.

It's a very basic "tool" and extremely less complete than ffmpegGUI (on OS4Depot) ;)

- replaced QProcess calls by an external procedure who uses APPDIR:ffmpeg
