Sir ?

Yes Sir ! At your service.

And done !

Thanks to your OS4 figlet port ;)

More tests needed before to release but it works pretty well...

Alignement, fonts, space in text... works.

Just a problem if you add a "Return" key in the sentence => crash of my external procedure.

And, as usual, when you copy/paste the text inside the window. It produce a html style output. But it's the same for all the Qt Apps that I recompiled (QuickTranslat for example).

Hopefully; "save as" text file works !
