@eliyahu

Huno has a finished, but not yet released port of NX-Engine.

@tlosm

A Huno is working on an RTCW port. Doom3 is beyond the capabilities of the current OS4 machines.

@utri007

An eduke32 port shouldn't be too hard without the polymer renderer. I know about erampage, I'm a huge fan of the series. I own a boxed copy of the game and its sequel. Unfortunately erampage32 is a bit buggy, and it's a real pain to get the expansions to work. [This website](#) has a package with updated CON files, I'll test it whether they help or not.
