Converting catalog in UTF-8 code

URL:

I have finished the localization (in greek) for the newest version of OWB, but in the catalog description file there is a part which strongly mentions to convert the below strings in UTF-8 (for the context menus).

How you can do that, when you create a new catalog? Although everything is working fine, the context menus appear empty (no characters).

Will I need a UTF-8 supported text editor for that, or I can fix that via FlexCat (I'm not completely sure about that)?
