OWB 1.16 crash

Hi there,

maybe this is already fixed for 1.23 but today I got a GR with Odyssey 1.16 where I hit "Ignore".

After a little while OWB presented me an own error requester (will upload the screenshot soon an link it here - or can pictures also be uploaded somewhere here?).

Unfortunately I do not know by heart where to capture the mentioned crash report from (not the one from GR but the one from OWB)! After I chose the crash-button nothing else happened but OWB froze.

Might this still be an issue for next version? Hopefully not!

Bye
