Struggling to get Odyssey to work with OpenURL in the same manner as previously.

Previously if the application was already open it would open a new URL in a tab, but at the moment its a completely new instance of Odyssey everytime.

'Rexx port now called Odyssey'

Except its not.. in OpenURL there is a gadget that lists currently available Rexx Ports.. it still reads as 'OWB'.

Compared to 1.16... no it was broken in that too.
