you can use 'iconv' tool ([http://www.os4depot.net/share/develop ... library/misc/libiconv.lha](http://www.os4depot.net/share/develop...library/misc/libiconv.lha)
[libiconv-1.11/src/iconv]) it translates from/to varios codesets (iso_8859-15 to utf-8)

ex.: iconv -f iso_8859-15 -t utf-8 file_to_translate >RAM:translated.txt

Maybe it can do "on the fly" translation ex.: iconv -f iso_8859-15 -t utf-8
