Just didn't notice it. Looks fine in new_look.jpg though. I just ran the fastfix1 build, and the button is slightly smaller here.

I noticed I had to set the MUI prefs again for it to open on a custom screen.

Also, in samo79's post, he has a button for the Web Inspector. I can't find where to add that (Edit: Found it).

Edit2: Is the new tab button supposed to be slightly larger than the text string gadget, and is the drop down history button supposed to be slightly smaller? I notice in your screenshot, you aren't using the default MUI theme, and both buttons are smaller than the string gadget. As I mentioned before, in your screenshot the add to bookmark button is the same size as the bookmarks button.
